PROFESSIONAL SUMMARY

Computer Science graduate with 6 months of hands-on internship experience building REST APIs, RAG-based document Q&A systems, and backend applications using Python and Flask. Hands-on experience in Generative AI and Agentic AI through personal projects, including LangChain and LangGraph-based multi-step AI pipelines. Familiar with semantic and hybrid search, vector databases, Redis caching, OCR pipelines, JWT-based authentication, Docker, AWS, and CI/CD.

WORK EXPERIENCE

Software Developer Intern — Xtensible Software Technologies Pvt. Ltd., Pune Dec 2025 – May 2026

- Built a document management system with JWT-based role-based access control for Admin and User roles.
- Worked on a software project under the guidance of senior developers, developing REST APIs and preparing technical documentation.
- Developed secure REST APIs and implemented OCR-based text extraction pipelines for document indexing.
- Designed and implemented a hybrid search system combining keyword and semantic search, using Redis caching to reduce latency by 30–40%.
- Integrated Whisper speech-to-text and gTTS text-to-speech for voice-based interaction, and enhanced in-browser PDF search using PDF.js.
- Containerized and deployed the application using Docker, with CI/CD pipelines (GitHub Actions) on AWS EC2.

PROJECTS

SmartDoc AI Engine (GitHub) Feb 2026 – Mar 2026

- Built a Retrieval-Augmented Generation (RAG) document Q&A system using Python, Flask, React.js, PostgreSQL, and a vector database.
- Generated Gemini embeddings for semantic similarity search and integrated Gemini 2.5 Flash for context-aware answer generation.
- Implemented Whisper STT and gTTS TTS for voice-based Q&A, and added Redis caching to reduce latency and API costs.
- Deployed a multi-container application using Docker Compose on AWS EC2.

Clarity Desk (GitHub) 2026

- Built an autonomous AI agent using LangChain and LangGraph to generate project proposals from natural-language requests through a multi-step workflow (plan → draft → self-review → generate).
- Implemented structured state-driven orchestration, reflection, and validation to improve proposal quality and control the agent execution flow.
- Designed a hallucination-prevention step that detects missing critical figures (budget, timeline, team size) and pauses to ask the user instead of fabricating values.
- Implemented async job processing, SQLite persistence, and a React frontend with live pipeline visualization.

FindMySpace — Roommate & Room Finder Platform (GitHub) Jul 2025 – Nov 2025

- Built a full-stack MERN platform with JWT authentication, user role permissions, room listings, booking, and Google Maps API integration.
- Developed a roommate-matching feature using a weighted rule-based algorithm, and used Redis caching to speed up repeated lookups.
- Built reviews, ratings, and owner-side CRUD operations so property owners can securely manage their listings.

TECHNICAL SKILLS

Languages: Python, Core Java, JavaScript, SQL
Backend: Python, Flask, Node.js, Express.js, REST API Design
Frontend: React.js
GenAI / Agentic AI: RAG (Retrieval-Augmented Generation), Semantic Search, Vector Databases, Gemini Embeddings, LangChain, LangGraph, Whisper (Speech-to-Text), gTTS (Text-to-Speech), OCR
Databases & Caching: PostgreSQL, MongoDB, Redis
Cloud & DevOps: AWS EC2, AWS S3, AWS RDS, Docker, CI/CD (GitHub Actions)
Tools: Git, GitHub, Postman, VS Code, Technical Documentation

EDUCATION

B.Tech, Computer Science — Sharad Institute of Technology, Yadrav 2022 – 2026
CGPA: 7.88 / 10

ACHIEVEMENTS

- TCS iON National Qualifier Test (NQT) – IT, June 2026 — Programming (Java): 79%, Advanced Quantitative & Reasoning: 81%

CERTIFICATIONS

- Web Development Certification — TecSpeak IT Solutions
- C Programming Certification — Stormsofts Technology
